Non-surgical facial rejuvenation through Dermal Fillers

Well respected throughout Southern California, with international clientele and a much lauded repertoire, Dr. Davoodifar – founding medical director of Irvine-based Derma Smooth Clinic – is on a mission to raise the awareness of skin care treatment and therapies, as well as client service expectations across the board.

With the aging process, the face loses volume and elasticity due to loss of collagen and hyaluronic acid. This loss of volume results in deep facial folds and thinning lips, resulting in an ever increasing 'older' look. Especially affected areas are around the mouth, around the lower nose and between the eyes.

Anti-aging has become a big industry, and a sharply increasing number of companies offer a wide variety of products and services to re-establish one's youthful look. From creams to plastic surgery, it is increasingly difficult for the end consumer to separate the prospects from the suspects, and to understand the advantages and disadvantages of each option.

In this forest of choices, Dermal Fillers stand out as a true winner. Dermal Fillers restore the lost volume, enhance shallow contours, soften the facial creases and wrinkles, plump thin lips and improve the appearance of acne scars. Treatment sessions are brief, virtually painless and results are immediate. Right away you can enjoy a natural, rested and more youthful appearance, and, with touch up treatments, put off the signs of aging for years.

When used with other skin rejuvenation treatments such as injections of neuromodulators (Botox®, Dysport®), they can even give the benefits of a face lift without invasive surgery and the resulting recovery time.

Restylane, Perlane and Juvederm

Currently, the most popular forms of dermal fillers are the hyaluronic acids, such as Restylane, Perlane and Juvederm. The reason being that they are natural, safe, easy to administer, rarely cause allergic reactions or permanent complications. They can even be reversed within 24 hours should you not be satisfied with the final outcome. Results can last up to one year or longer depending on whether you maintain with touch up treatments.

Hyaluronic acid is a natural substance found in many tissues of the human body. The Restylane and Juvederm family of products are derived from living bacteria cells, which makes them especially safe by eliminating the risk of contamination with disease causing viruses. Because the bacteria cells produce the same type of hyaluronic acid as our bodies, the risk of causing allergic reactions is also very rare, hence, no skin testing is required prior to injection of this substance. When injected into the aching joints of people with arthritis, hyaluronic acid provides extra cushioning and eases the pain. When injected for facial rejuvenation, it instantly adds volume and fullness for a more youthful looking skin.

There are many other forms of Dermal Fillers in the market today that are also FDA approved, like Radiesse, Sculptra, CosmoDerm, Cosmoplast, to name a few. And new fillers are in the process of being developed to even further patient comfort, safety and duration .

Consult an experienced medical professional or call us for a free consultation to establish which filler is best for you.
